

# Analytics & AI Solutions Overview

## Data-Driven Business Transformation

Levi, Ray & Shoup (LRS), is a leading supplier and service provider of Analytics & AI solutions. We represent industry-leading technologies to help our clients gain a competitive advantage by harnessing the power of data. Whether you are just starting out with analytics or have a mature environment, we can help you find the right solution to meet your needs.

The LRS Analytics & AI practice will help you reimagine your business through data, create a modern data platform, and unlock the business value stuck in your siloed applications. Here's what you can expect when you work with LRS:

- Support for the leading Analytics vendors
- Strategic solutions integration
- Solutions designed around your business need, timeline & budget

## Our Solutions

LRS offers a variety of Analytics solutions and services that can be customized to meet each client's specific needs. Every solution we provide is integrated, implemented and supported by our highly certified consultants. Whether you are looking to extend the power of the solutions you already have in place, or implement new platforms to get more from your data, we have the experience to help your organization improve efficiency, mitigate risk, prevent fraud, reduce cost, identify new markets, and more.

## Strategy & Roadmaps

We will collaboratively analyze the business processes, applications, skills, and technology of your data and analytics environment. Then comparing them to maturity models and best practices, we'll identify gaps that prevent you from achieving your business goals and recommend the capabilities and technologies you need to attain them.

## Modern Data Architecture

Data is moving faster and your business is operating faster. Cloud-native, microservices-based virtualization and data fabrics help you break down data silos, democratize your information, and power the next generation of analytical applications in less time than traditional ETL and data warehousing approaches.

## Data Integration, Catalogs, & Governance

As experts in data integration, we help you leverage the intelligence of Machine Learning-infused platforms to find and classify all of your data, create automated data pipelines, and reduce the time and effort of data engineering for AI applications.

## Augmented Analytics

Use Natural Language Processing, Artificial Intelligence, and conversational interfaces to allow all users to interact with your data, build models, and gain insights. No prior knowledge of data locations, data relationships, or data science needed.

## Data Security

We can help protect your data from external and internal threats who want to access and steal your assets. Data protection is just one part of a broader approach that shields you against malware and unauthorized network access, while keeping you compliant with the latest cybersecurity and privacy laws.

## Cloud, Containers, and Managed Services

LRS partners with the leaders in cloud-based analytical platforms such as IBM, Red Hat, and Amazon. If you need to migrate on-prem solutions to the cloud, we are partnered with the leading hosting companies and are also able to monitor, manage, and support those applications.

## LRS offers a broad range of solutions & services

In addition to our Analytics & AI team, LRS has a national team of technical experts certified in the following disciplines:

- IT Infrastructure
- IT Optimization
- Software Applications & Business Solutions
- Security
- Cloud
- Software Asset Management
- Business Continuity
- Asset & Systems Management
- Project & Process Management
- Managed Services
- Financial Services (Financing)
